SPECIALISTS IN  
THERMOFORMING  
OF THERMOPLASTIC  
MATERIALS

**Limp srl**, company specializing in large thermoplastic components, produced for the **nautical, general aviation, ropeway industries, designs and manufactures highly innovative products.** In particular, the experience in using advanced technology machinery and tested processes, allows us to resolve also complicated technical issues, making the most specific requests feasible.

We supply working drawings by using **laser cut, 3D cutting CN, folding, thermoforming, gluing.**

For the **ropeway and nautical industries** we produce complete sets of aluminium and 316 stainless steel frames, we develop customized products making our specific experience available.

We are getting very good response from other sectors such as **furniture and lighting.**

We produce shaped components for various applications like methacrylate shells for chairs, stools and armchairs, wall mirrors, tables, wall, ceiling and floor lamps, and more.

Providing quality supplies with the best care and service speed is one of our strong points.

From the sample shipment to the delivery of the goods, punctuality consolidates the relationship with our old customers and reassures the new ones.

CATERING BUSINESS

**Limp srl** offers a unique experience in the thermoforming field, in the manufacturing and assembling of plastic materials and its skills are recognised in the production of transparent products for several fields of application.

From the design phase, through manufacturing and delivery, the production is constantly monitored.

By virtue of our experience we transform all plastic materials (**Polycarbonate, PMMA, ABS, PET-G, PST, PE and others**) in order to enhance their quality.

## Molds design

Thanks to the qualified companies with which we cooperate, we study and produce molds in different shapes and in various materials: aluminium, wood and composite resins, fit for the production cycle optimization.

## Sheets processing molds

The combination between modern technologies and craft skills make it possible for **Limp srl** to turn a "simple" semifinished product into a component with the features requested by the customer: optical, mechanical, thermal and duration properties of the "piece".

## 3D cutting CN

Roughing, 3D 5 axis cutting, finishing and packing end the production cycle of the components produced respecting the various project specifications requested.

OEM

**Limp srl** makes its technical experience available for special projects.

The company responds to all customer needs also for special requests. In fact the knowledge acquired has allowed to approach the group of polyethylene semifinished products, thus solving the peculiar problematic due to the complexity of these polymers.

Materials forming is performed by compression molding or furnaces for heating, up to the 5500 x 2500 mm size.

Thermoformed products are finally drawing cut with CNC machines in 5 axes.

General  
Aviation

We are present in very high optical quality productions, as we approach a market requiring strict technical specifications.

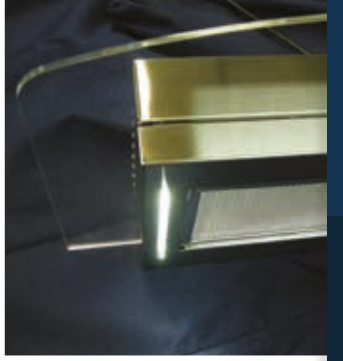

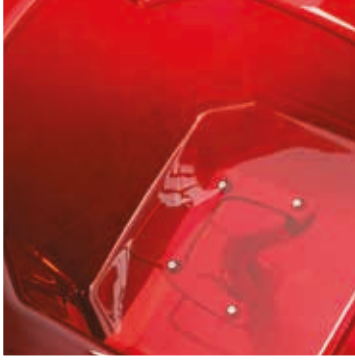

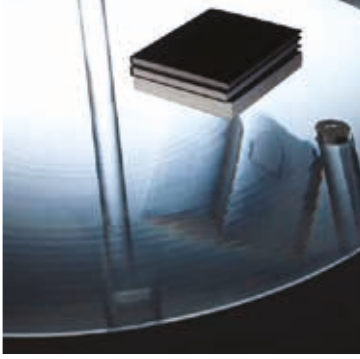

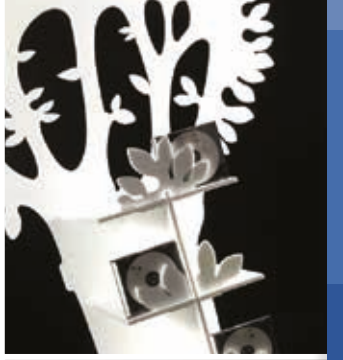

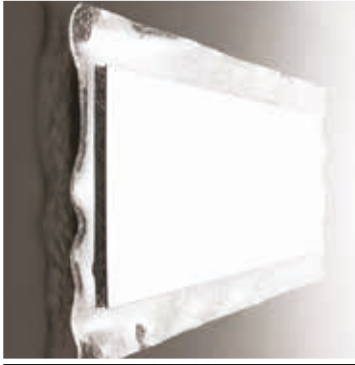

## Furniture

We cooperate with some of the most prestigious companies of the furniture and interior design industries.

Together with their technical departments, we design and develop projects with the goal to obtain a high quality product.

To do this we select the best materials existing on the market.

Catering Business

# Ropeway Industry

We have been producing bubbles for chairlifts, windows for aerial tramways and window covers for stations for over 20 years.

We produce these items using first quality Polycarbonate, PMMA and PET-G.

Large  
Sizes

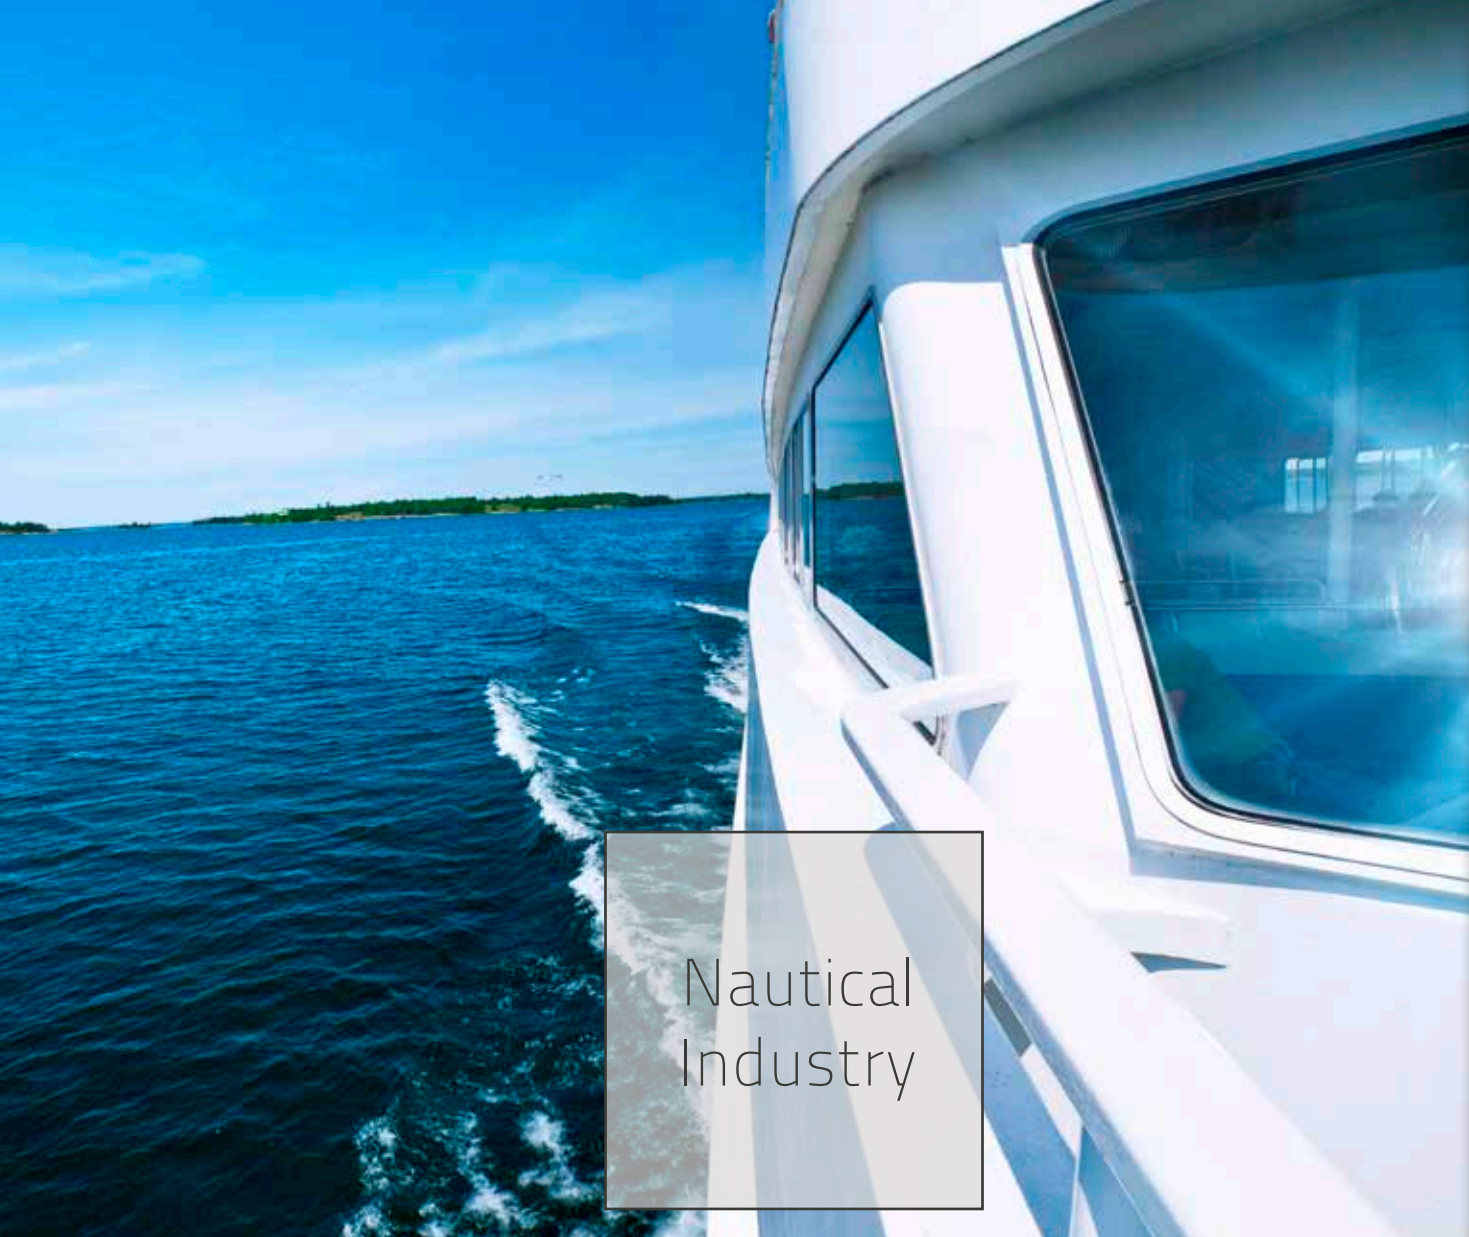

In collaboration with manufacturers of semifinished products and in tune with the designers, we can produce also single pieces, evidence of great business dynamism, as we can choose between continuous cycle processes and purely craft productions.

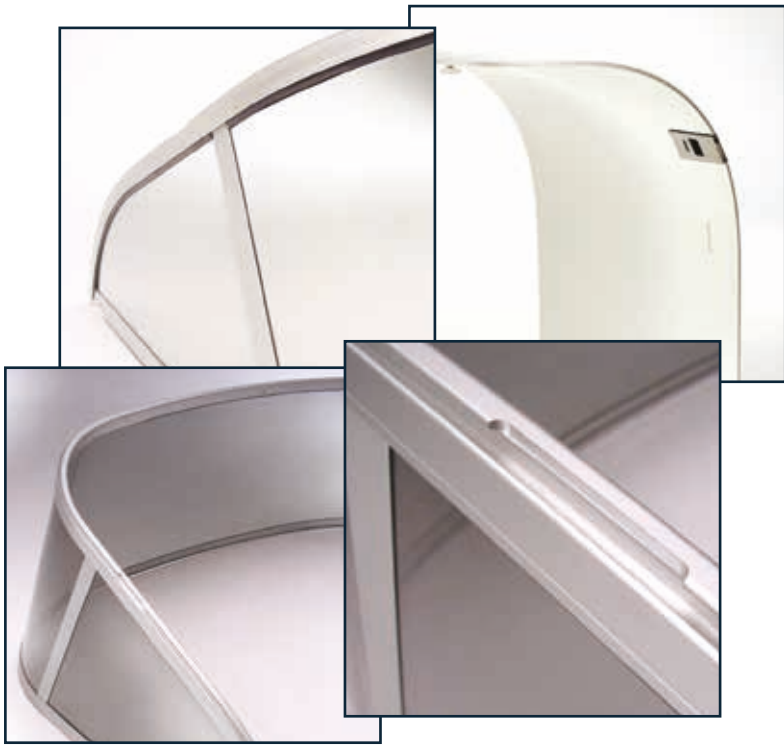

## Lighting

Thanks to their peculiar features, acrylic materials in various colours and finishes are used in the lighting sector.

We therefore produce, on our customers' request, screens for lighting of various shapes and sizes.

# Nautical Industry

**Limp srl** produces windshields and accessories for the nautical industry cooperating directly with the shipyard; our long time experience in manufacturing allows us to apply the most suitable solution.

Transparent surfaces are made of PMMA (plexiglas) in various colors and thicknesses. Not just windshields, but also sliding doors, windows and portholes.

Catering Business

# Catering Business

The high quality and wide range of components for trolleys, buffets and vending machines, and the ability to produce customized items enable us to meet the needs of the customers in the field of furnishing accessories for catering.
